DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) The invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-3 are rejected under 35 U.S.C. 102(b) as being anticipated by Murari et al. (U.S. Patent # 5,036,269).

Murari et al. Discloses claimed invention an internal voltage generation circuit (figure 1-3), including a voltage divider (figure 1, item R1 and R2), a comparator (figure 1, item A), a reference voltage (figure 1, item VR) and a driver for supplying the external voltage (figure 1, item OUT).

3. Claim 1 is rejected under 35 U.S.C. 102(b) as being anticipated by Jeon (U.S. Patent # 5,747,974).

Jeon discloses claimed invention an internal voltage generation circuit (figures 1,3 and 5), including a voltage divider, a comparator (figure 3, item 13a), a serially connected resistors (figure 3, item 15a), a reference voltage generator (figure 3, item 12).

Claim Rejections - 35 USC § 103

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claims 1-6 are rejected under 35 U.S.C. 103(a) as being unpatentable over Applicant's prior art figure 3 in combinations with Bertails et al. (U.S. Patent # 4,442,398).

Applicant prior art disclose the claimed invention except the utilization of the technique for a first and second diode type NMOS transistor for bias current reference. However Bertails et al. teaches the similar technique for a first and second diode type NMOS transistor for bias current reference (figure 1, item 20 and 24). It would have been obvious one having an ordinary skill in the art at the time the invention was made to modify Applicant's prior art internal voltage generator circuit by utilizing the technique taught by Whatley for the purpose of improving bias current reference circuit.
